

WHERE WE ARE NOW...

We have been producing the Universal Trellis Clip in Arlington, WA since 2010. We are continuing Ludwig's business mission: farmers should have the products they need to do their job efficiently when they need them. Our clips are used around the world and have given farmers the competitive edge they need in today's world market.

WHERE IT ALL STARTED...

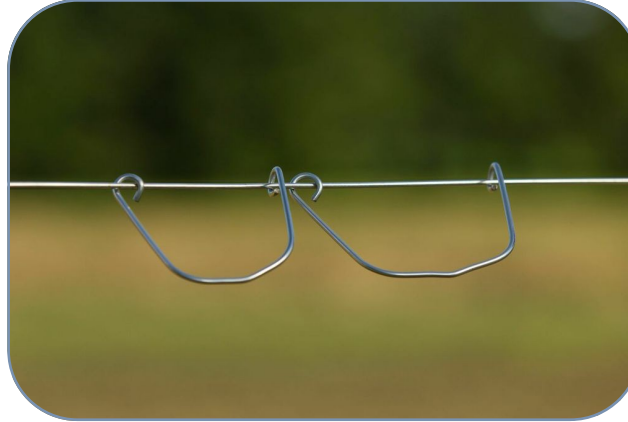

Farmers are always searching for practical and more efficient ways to do their job. An experienced apple grower named Ludwig Gohly designed the Universal Trellis Clip to reduce the time and money he spent on his orchard located in Osoyoos, British Columbia.

Evans Manufacturing Company began working alongside of Ludwig, manufacturing the Universal Trellis Clip. Over the years, this method has benefited farmers locally and worldwide.

PRODUCT IN ACTION...

Using the hook is very efficient. It requires only one hand to attach the clip or "hook" to the trellis wire, leaving the other hand free to support the tree in its place. Once connected to the wire, the hook keeps the tree standing firm, even when windy.

Besides being fast and easy, it's economical. Since the time spent in the orchard is reduced, labor costs are *lower*. No tools are required or recommended for the job.

MORE THAN JUST APPLE TREES...

The original intent of the clip or "hook" was for apple tree support and irrigation lines, but its other purposes include:

- Other types of fruit trees
- Berry canes
- Vines

The hook also comes in two sizes:
Large and Small.
